

AI-POWERED CAREER ROADMAP

Student → Data Analyst / Python Developer | Timeline: 3 Months

■ CURRENT POSITION	■ TARGET GOAL
Status: Student	Role: Data Analyst / Jr. Python Dev
Skills: Python, Data Analysis	Timeline: 3 Months
Strengths: Analytical thinking, coding foundation, academic focus	Outcome: First full-time job offer with a data/tech team

■ SKILL GAP ANALYSIS

Skill	Status	Action Needed
Python (Pandas/NumPy)	■ Have	Deepen with real datasets & automation scripts
Data Analysis	■ Have	Add storytelling: dashboards & insights narrative
SQL	■■ Partial	Master JOINS, subqueries, window functions
Data Visualisation	■ Gap	Learn Matplotlib, Seaborn, Tableau/Power BI
Statistics	■ Gap	Hypothesis testing, regression, probability basics
Git & GitHub	■ Gap	Version control — non-negotiable for all tech jobs

■ LEARNING PLAN

Mo	Focus
M1	SQL + Git + NumPy/Pandas deep-dive (Mode Analytics, StrataScratch)
M2	Matplotlib, Seaborn, Tableau Public + Statistics basics
M3	Capstone projects + Resume polish + Mock interviews + Apply

■ SUGGESTED PROJECTS

- EDA Dashboard — Analyse Kaggle dataset (Titanic/IPL) with Python + Matplotlib → push to GitHub
- SQL Sales Report — 10 complex queries on a public DB; share as a PDF report
- Tableau Public Story — Visualise COVID/e-commerce trends; publish & share on LinkedIn
- Capstone: End-to-End — Choose a domain, clean → analyse → visualise → present findings

■ NETWORKING STRATEGY

LinkedIn: Headline → 'Aspiring Data Analyst Python SQL'. Post 1 insight/week.
GitHub: Pin 3 best repos with clean READMEs and screenshots.
Communities: DataTalks.Club, Kaggle forums, local Python meetups.
Cold DM: Message 5 data analysts/week — ask one specific question.
Job Boards: LinkedIn, Naukri, Instahyre — apply to 10 roles/week in Month 3.

■ MONTHLY MILESTONES

Mo	Milestone
M1	SQL proficient + Git set up + 1 EDA project on GitHub
M2	Tableau dashboard published + Statistics course completed
M3	4 portfolio projects + ATS resume + 30 applications sent

■ IMMEDIATE NEXT ACTIONS (This Week)

When	Action
Day 1-2	Create GitHub account. Push best Python project with a clear README.
Day 3-4	Begin 'SQL for Data Analysis' on Mode Analytics or StrataScratch (free).
Day 5	Optimise LinkedIn — headline, About section, GitHub link added.
Day 6-7	Download a Kaggle dataset. Start EDA notebook. Commit progress daily.
